INTRODUCTION

SHRI JASNATH TESTING AND CALIBRATION LABORATORY is one of the acknowledged testing laboratories recommended by National Accreditation Board for Testing and Calibration Laboratories (NABL) that is a constituent board of Quality Council of India. Founded in 2019, it is engaged in providing clear and accurate testing services. The laboratory has performed and excelled tremendously in the field of testing and analysis of materials offering a comprehensive range of services including Mechanical / Physical Testing services, Chemical Testing Services & NDT Testing Services. The testing is performed by highly qualified experienced technical personnel with International exposure. Shri Jasnath Testing And Calibration Laboratory provides very attractive business terms for the total satisfaction of the customers. SHRI JASNATH TESTING AND CALIBRATION LABORATORY is located at **Plot No. 88, Jasnath House, Mansa Nagar, Sirsi Road, Jaipur-302012**

It is an ISO 9001:2015, ISO 14001 : 2015 and ISO/IEC 17025:2017 certified laboratory, managed by a team of experienced professionals. The laboratory provides critical services to its high quality, diversified customer base. The platform has been put in place by, Mr. MANGI NATH SIDH, having an experience of over 9 years in the field of testing & quality assurance in prestigious organizations and who currently acts the Quality Manager and Technical Manager of the laboratory.

Jaipur is known as Air-conditioned city of India and well connected by Roads, Rails and Air with all the major cities of India and some of the foreign country also. The laboratory is well connected by roads.

The testing certificates issued by Shri Jasnath Testing And Calibration Laboratory are acceptable to all Private sectors & Authorities of Government of India as well as many agencies all over the world. Shri Jasnath Testing And Calibration Laboratory using highly precise testing equipments with world class measurement capability.

We request you to go through the details of the lab facilities and equipment's and give us chance to render our services. Kindly contact us in case of any queries. Please convey us the most suitable time if you wish to visit our facility and we would be glad to welcome you.

QUALITY POLICY

SJTCL is committed to good professional practices and compliance to applicable regulations to ensure the quality of operations in its testing.

SJTCL shall implement management system as per ISO/IEC 17025:2017 as applicable, to generate technically valid data and results.

SJTCL shall ensure that all personnel involved in the quality of operations familiarize with the policies and procedures of the management system and implement the same in their work.

SJTCL is committed to produce reliable and error free test results.

SJTCL shall ensure customer satisfaction by maintaining independence, impartiality and integrity in its operations, and improving its management system continuously.

QUALITY OBJECTIVES

- Providing reliable testing services, accurately and timely, to the satisfaction and requirements of customers.
- Commitment to ensure the impartiality, confidentiality, competence and consistence operation of the laboratory activities.
- To ensure confidentiality of customer information.
- Continual improvement and up gradation of services and laboratory facilities in accordance with changing customer requirements.
- Improving customer satisfaction feedback index.
- Increasing resource generation.

To meet the above objectives, the laboratory follow the management system appropriately for the scope of their activities and meeting the requirements of NABL criteria of accreditation and ISO/IEC: 17025:2017 – “General requirements for the competence of testing and calibration laboratories”, and are provided with necessary resources.

The laboratory is committed to follow good professional practices and provide highest possible standard of services to the customers at all times, and continually improve the effectiveness of the management system.

All personnel concerned with the testing activities of the laboratories shall familiarize themselves with the content of the Laboratory Quality Manual and comply with its policies and procedures laid down in the Laboratory Quality Manual and associated documentation, at all times.

OUR MISSION

- To satisfy the customer requirements in Construction Material Testing, Soil Testing and Concrete Testing services with Consistency and reliability.
- We are committed to high standards of client service, staff development, ethical practice, safety, accuracy, reliability, timeliness, and communication. Our clients seek us out for our reputation as a truly integrated firm whose ability to collaborate extends beyond our own walls to embrace our clients, the project team and the community.
- Our objective is to seek continuous improvement in the Quality of our delivery. Regular audits and checks are carried out at critical projects at attain perfection and a high standard of quality in all the phases of network.
- To ensure excellent quality of test results to the customer in the area of Building Material Test, Soil Test, NDT, Fresh and Hardened Concrete Oriented Researches.

OUR VISION

- To give Glory to God in the first place through all our Testing services.
- To be the Vibrant Organization in Civil QA/QC Laboratory Testing Field towards contribution of Industrial /Residential / Infrastructural building growth of the nation.
- To enlarge our Laboratory across the India and International markets.

All Construction Material Testing

SJTCL Lab has fully equipped state-of-the-art equipments for in-house testing facilities for performing physical and chemical tests on most of the construction materials and their products under controlled environmental conditions, in accordance with BIS and other International Standards.

Different types of materials are used for construction purpose. These materials need to be tested for quality and to get specifications. This quality of materials ensures stability of structure and specifications are used to get required amount of material.

SJTCL Lab has made its reputation in material testing through the course of time by delivering reliable and accurate test parameters. In SJTCL all the tests are performed by a highly qualified and experienced team according to relevant Indian Standards.

Geotechnical / Soil Investigation

Geotechnical drilling is a critical element to the investigation required to ensure that the ground is solid for the placement of the foundation. This is especially important when the construction is onshore or close to the shore. Geotech drilling is used to analyse the site. It involves collecting rock and soil samples at representative levels below the desired foundation depths, at a collection of different locations in the building site. Drilling and core samples are used to create a soil profile for the site. This profile helps to find unsafe rock, explore soil conditions, and determine the integrity of the site. When the soil profile is performed effectively, it prevents structural collapse due to earthquakes, floods, tornados, or other natural disasters.

We have skilled and experienced teams of professional drillers, geologists, and geophysicists who are able to work effectively in any given environment around the world, on a wide range of commodities and deposit styles. We carry out below-ground investigation by boring, sampling, and testing the soil strata to establish its compressibility, strength, and other characteristics likely to influence a construction project, and prepare a subsurface profile and soil report.

SJETL Provides various geotechnical services which includes both geotechnical drilling and laboratory testing service for Highway Bridges, Highway Roads, Land survey, Railway Line, Cross Drainage, Check Dams, Tunnels for Railways, Thermal Stations, Windmill Power Plants, Solar Power Plants, Cement Plants, Gas Pipe Line, Industrial Buildings, Residential Buildings, Commercial Buildings etc.

For Geotechnical drilling works, we are providing various services as listed below:

- Drilling in soil and rock up to 150 meters.
- Performing Penetration Tests (SPT, DCPT, and SCPT).
- Collection of disturbed and undisturbed samples.

CONCRETE MIX DESIGN

Concrete Mix Design is a method for selecting suitable ingredients of concrete and analyzing their relative quantities for producing concrete. The concrete produced should be made as economic as possible with minimum properties, significant workability, durability and strength. An accurate determination of mix proportions by using computer data is usually not possible as the materials used are essentially variable and their properties are not assessable quantitatively.

Concrete Mix Design is an extremely flexible building material which can be exclusive designed for strength that may range from M10 to M100. A mix selection needs appropriate knowledge of concrete properties as well as the experimental data and the most importantly, who conducts the mix design. The objective of preparing a design mix is to achieve a good quality concrete in the best economic way.

- Better strength
- bullet Better durability
- Bullet Dense & homogeneous concrete

Non Destructive Testing (NDT)

Non-destructive testing (NDT) refers to the examination of materials for flaws without harming the object being tested. As an industrial test method, NDT provides a cost effective means of testing while protecting the object's suitability for its designed purpose.

Concrete and Reinforced Concrete structures both new and old need non-destructive testing for their footings, foundations, columns, beams and slab to know their conditions related to their residual strength for the quality of concrete used, their safety and rehabilitation if necessary.

SJTL Lab is equipped with state-of-the-art equipments and competent staff for this purpose.

- Rebound Hammer Test
- Ultrasonic Pulse Velocity Test
- Pile Integrity Test
- Half Cell Potential Test
- Carbonation Test
